## Recombinant Angola marburgvirus Glycoprotein minus the Transmembrane Region (MARV-Angola rGPΔTM)

Catalog #: 0506-015

Lot #: 1710008

**Description:** Mature, recombinant, His-tagged Angola marburgvirus Glycoprotein minus the transmembrane domain (MARV-Angola rGPΔTM) is supplied as purified protein. MARV-Angola rGPΔTM is produced in Sf9 insect cells using baculovirus for expression and is purified by FPLC.

**Storage:** 2-3 weeks at -20°C, -80°C long term

**Size:** 100 µg of protein supplied in PBS (supplemented with glycerol, arginine and glutamic acid) at a concentration of 0.325 mg/mL. The theoretical molecular weight of the protein is ~60 kDa including the His-tag, without glycosylation. Because of the highly glycosylated nature of this protein, migration in an SDS-PAGE gel is slowed resulting in broad, diffuse bands representing differing glycosylation forms.

**Relevance:** Recombinant glycoprotein provides a means for antibody development, control protein for testing, and a tool to enhance research.

**Western Blot:** Quality control testing demonstrates strong detection of GP null and GP2 under reduced conditions.

**Related Products:** IBT provides a wide array of anti-filovirus specific antibodies and other infectious disease reagents. Please see our website, [www.ibtbioservices.com](http://www.ibtbioservices.com) for more details.

### SDS-PAGE & Western Blot Detection

(A) SDS-PAGE and stain demonstrating 5 µg and 1 µg (lane 1, 2 respectively) of MARV-Angola rGPΔTM His-tag protein under denaturing and reducing conditions. MW denotes Novex Sharp prestained protein markers. (B) Western blot detection of MARV-Angola rGPΔTM at 50 ng, 100 ng and 500 ng (lanes 1-3). MARV-Angola rGPΔTM was detected using IBT's polyclonal antibody (catalog # 0303-007) at 0.5 µg/mL and anti-rabbit IgG-HRP conjugate, followed by substrate.

### ELISA Data

MARV-Angola rGPΔTM ng/well	OD 650 nm
800.000	3.748
400.000	3.519
200.000	3.370
100.000	3.462
50.000	3.381
25.000	3.174
12.500	2.866
6.250	2.536
3.125	1.933
1.563	1.278
0.781	0.790
0.391	0.372

Plate was coated with MARV-Angola rGPΔTM starting at 800 ng/well, serially diluted in DPBS. Washed plate was detected using one dilution of a positive control serum, followed with anti-IgG HRP conjugate and TMB substrate. OD<sub>650</sub> is reported. Background of MARV-Angola rGPΔTM coated plate without positive control serum was 0.073 OD<sub>650</sub>.

**Intended for research use only. Not for human, therapeutic, or diagnostic applications.**
